

VISUALIZATION & FORENSIC ANIMATION

YA Group delivers high-impact visual solutions that clarify complex scenarios in litigation. Our team develops exhibits ranging from simple diagrams to advanced 3D forensic animations—tailored to suit a variety of case types and budgets.

OUR SERVICES

- 3D Animation & Graphics
- 3D Building Walk-through Visuals
- Accident Reconstruction Visuals and Animation
- Forensic Video Analysis
- Medical Visuals
- Re-enactment & Visibility Studies
- Trial Exhibits

YA Group delivers visual solutions that support litigation through clear, effective storytelling. Our services include 3D forensic animation, accident reconstruction, and forensic video analysis—each grounded in engineering expertise and advanced technology. From analyzing vehicle collisions to creating medical visuals that illustrate trauma, we turn complex data into understandable exhibits. Using tools like 3D modeling, photogrammetry, and PC Crash, we ensure accuracy and clarity. Our LEVA-certified staff stay current through ongoing training to provide visuals that hold up under scrutiny.

For building structures, we develop architectural walkthroughs that allow users to virtually explore the space either prior to construction or prior to a catastrophic event. Visibility studies and reenactments also allow us to assess environmental and spatial factors. For courtroom settings, we create high-quality models based on scaled and data-driven representations of vehicles, structures and scenes. From analysis to presentation, YA Group delivers expert support that helps clients present their cases with confidence.
